DevOps Engineer | Cloud Infrastructure | Automation & Release Management

PROFILE SUMMARY

Results-driven DevOps Engineer with 6+ years of IT experience, leveraging a strong foundation in Middleware and Systems Administration to drive robust DevOps practices. Hands-on experience managing and optimizing **Jenkins-based CI/CD pipelines**, alongside **Terraform-driven Infrastructure as Code (IaC)**, **Configuration Management using Ansible** and containerized workloads using **Docker and Kubernetes** across **AWS and Azure** environments. Expert in bridging the gap between operational resilience and modern engineering, actively advancing automation through **Python and Bash** scripting to eliminate manual processes. Committed to delivering scalable automation and high-availability solutions in fast-paced technical teams.

CORE COMPETENCIES

Site Reliability Engineering | DevOps Engineering | CI/CD Pipeline Design | Cloud Infrastructure (AWS, Azure) | Infrastructure as Code (IaC - Terraform, ARM) | Ansible | Git & GitHub Actions | Kubernetes | Configuration Management | Monitoring & Logging (Prometheus, Grafana) | Release & Deployment Management | Automated Build & Test | System Administration | Linux/Unix Environments | Incident Management | Performance Optimization | Process Automation | Continuous Testing | Security & Compliance | Stakeholder Engagement

WORK EXPERIENCE

Aug 2023 - Dec 2025 | FIS Global | Service Delivery Analyst

- Managed, monitored, and optimized existing enterprise CI/CD pipelines using Jenkins and Azure DevOps, ensuring smooth daily deployment workflows and reducing manual deployment friction.
- Supported scalable, cloud-native environments by managing containerized application workloads and overseeing artifact versioning across Azure Container Registry (ACR) and Amazon ECR.
- Maintained and administered existing AWS infrastructure using Terraform, managing configurations for core services like VPC, EC2, and S3 to ensure environment consistency and stability across projects.
- Monitored end-to-end system health using Prometheus and Grafana, utilizing real-time observability dashboards to accelerate root-cause analysis and assist in reducing incident Mean Time to Resolution (MTTR) by 30%.
- Supported security best practices by implementing environment isolation and automated vulnerability scanning within the CI/CD pipeline.

Nov 2021 - Aug 2023 | Spanidea Systems Pvt. Ltd. | System Engineer (contract employee for FIS)

- Delivered ITIL-compliant application support across FIS platforms, managing incidents, changes, and problem resolution while monitoring scheduler jobs, resolving stuck file processes, and supporting weekend patching activities to ensure service stability.
- Led cross-team problem management initiatives, facilitating internal technical discussions to standardize root-cause analysis practices and improve incident prevention and operational efficiency.

Apr 2019 - Nov 2021 | ESDS Solutions Pvt. Ltd. | Junior Technical Associate

- Administered and optimized Windows Server (2008-2019) environments, managing patching, VMware virtualization, antivirus hardening, IIS, DNS/DHCP, SSL, and web hosting platforms (Plesk, WebsitePanel), while executing end-to-end website, database, and email migrations to ensure high availability, security, and operational stability across on-premises and hosted infrastructures.

PROJECT DETAILS

End-to-End GitOps Deployment for Three-Tier Voting Application | Azure DevOps, AKS, ACR, Argo CD

- Engineered automated CI/CD pipelines using Azure DevOps to containerize and deploy a multi-tier microservices application.
- Provisioned AKS cluster and implemented a CD model using ArgoCD to automatically synchronize cluster state with Git manifests.
- Securely integrated Image Pull Secrets into Kubernetes deployments to streamline delivery from private ACR, successfully resolving image pull constraints and manifest updates.

End-to-End AWS Serverless CI/CD Architecture | AWS CI/CD, Terraform, S3, CloudFront, IAM

- Architected a zero-touch CI/CD pipeline using AWS CodePipeline and CodeBuild, completely automating the build and deployment process from GitHub to production.
- Codified the entire cloud infrastructure—including S3 buckets, CloudFront distributions, and least-privilege IAM roles—using modular Terraform configurations for repeatable deployments.

End-to-End Kubernetes Three-Tier E-Commerce Platform | Jenkins, EKS, Terraform, Argo CD

- Delivered an automated CI/CD pipeline for a three-tier e-comm application using Jenkins, Docker, Kubernetes (EKS), and terraform.
- Implemented GitHub-based triggers, infra provisioning via Terraform, and GitOps-driven deployments using Argo CD for consistent, scalable releases.

EDUCATION DETAILS

- B.E in Computer Science | Sir Visvesvaraya Institute of Technology | 2018
- AZ-900 Azure Fundamentals
