Senior Cloud Systems Engineer | Site Reliability Engineer (SRE) | Cloud Operations

PROFILE SUMMARY

Results-driven **Cloud Systems and Reliability Engineer** with 6+ years of experience bridging traditional system administration and modern cloud operations. Dedicated **individual contributor** specializing in provisioning secure **AWS and Azure** environments using **Terraform**. Proven expertise in minimizing downtime and reducing MTTR by leveraging **Prometheus, Grafana, and Dynatrace** for root-cause analysis. Highly skilled in troubleshooting **Kubernetes cluster states** and resolving **Azure DevOps pipeline failures** to ensure robust enterprise resilience.

CORE COMPETENCIES

Site Reliability Engineering (SRE) | Cloud Systems Administration | Cloud Infrastructure (AWS, Azure) | Infrastructure as Code (Terraform, ARM) | Configuration Management (Ansible) | Kubernetes & Containerization (Docker, AKS, EKS) | Observability & Telemetry (Prometheus, Grafana, Dynatrace) | Scripting & Automation (Bash, Python, PowerShell) | Linux/Unix Administration | Active Directory | Incident & Problem Management (ITIL) | Mean Time to Resolution (MTTR) Reduction | Security & IAM Hardening

WORK EXPERIENCE

Aug 2023 - Dec 2025 | FIS Global | Service Delivery Analyst

- Monitored enterprise **Azure DevOps pipelines**, acting as the primary escalation point to resolve automated build failures, diagnose complex **Kubernetes deployment errors** (e.g., CrashLoopBackOff, ImagePullBackOff), and provision on-demand infrastructure.
- Supported scalable, cloud-native environments by managing containerized application workloads and overseeing artifact versioning across Azure Container Registry (ACR) and Amazon ECR.
- Maintained and administered existing AWS infrastructure using Terraform, managing configurations for core services like VPC, EC2, and S3 to ensure environment consistency and stability across projects.
- Monitored end-to-end system health using Dynatrace, Prometheus and Grafana, utilizing real-time observability dashboards to accelerate root-cause analysis and assist in reducing incident Mean Time to Resolution (MTTR).
- Supported security best practices by implementing environment isolation and automated vulnerability scanning within the CI/CD pipeline.
- Managed Active Directory (AD) user lifecycles, including provisioning accounts, resetting passwords, and configuring security group permissions for enterprise applications.

Nov 2021 – Aug 2023 | SpanIdea Systems Pvt. Ltd. | System Engineer (contract employee for FIS)

- Delivered ITIL-compliant application support across FIS platforms, managing incidents, changes, and problem resolution while monitoring scheduler jobs, resolving stuck file processes, and supporting weekend patching activities to ensure service stability.
- Led cross-team problem management initiatives, facilitating internal technical discussions to standardize root-cause analysis practices and improve incident prevention and operational efficiency.

Apr 2019 – Nov 2021 | ESDS Solutions Pvt. Ltd. | Junior Technical Associate

- Administered and optimized Windows Server (2008–2019) environments, managing patching, VMware virtualization, antivirus hardening, IIS, DNS/DHCP, SSL, and web hosting platforms (Plesk, WebsitePanel), while executing end-to-end website, database, and email migrations to ensure high availability, security, and operational stability across on-premises and hosted infrastructures.

PROJECT DETAILS

Multi-Tier Cloud Platform Deployment on Azure AKS | Azure DevOps, AKS, ACR, Argo CD

- Provisioned and configured an Azure Kubernetes Service (AKS) cluster to host containerized multi-tier microservices with high availability.
- Implemented a GitOps continuous delivery workflow using ArgoCD to automatically sync cluster state with version-controlled Git manifests.
- Configured ImagePullSecrets and role-based access to securely pull container images from private Azure Container Registry (ACR), eliminating authentication and manifest synchronization errors.

Modular AWS Serverless Infrastructure Provisioning | AWS CI/CD, Terraform, S3, CloudFront, IAM

- Codified and deployed scalable cloud infrastructure—including S3 storage, CloudFront CDN distributions, and least-privilege IAM roles—using modular Terraform templates.
- Automated infrastructure provisioning workflows from GitHub to ensure consistent, drift-free environments across deployment stages.
- Implemented IAM security boundaries and bucket policies to enforce encryption at rest and secure static asset delivery.

Resilient Microservices Infrastructure on Amazon EKS | Jenkins, EKS, Terraform, Argo CD

- Provisioned Amazon EKS clusters, VPC networking, and worker node groups using modular Terraform configurations.
- Deployed containerized three-tier application workloads onto Kubernetes, managing service routing, resource limits, and health checks.
- Configured GitOps-driven deployment manifests with ArgoCD to ensure predictable, drift-managed releases across environments.

EDUCATION DETAILS

- B.E in Computer Science | Sir Visvesvaraya Institute of Technology | 2018
- AZ-900 Azure Fundamentals
